

Compliance Solutions

EPA Vessel General Permit Sampling Services

The VGP was implemented to protect the environment from chemical pollutants and aquatic invasive species. The VGP provides permit coverage for discharges incidental to the normal operation of a vessel into waters of the United States from commercial vessels greater than 79 feet in length. Regulating 27 different vessel discharges, permit compliance requires vessel owners or operators to meet sampling, analysis, and reporting requirements for:

- Bilgewater oil and grease concentration;
- Ballast water treatment system functionality, biological indicators, and chemical biocides / residuals;
- Graywater biological indicators and water quality; and
- Exhaust gas scrubber washwater oil, water quality, and metals.

Compliance sampling does not have to be done by the crew. A collaboration between Moran Shipping Agencies, Inc. and EnviroManagement, Inc. offers over 100 years of combined experience in environmental sampling and vessel compliance services, with 15 years specifically focusing on ballast water. Very simply - we're experienced and deeply involved with many facets of this complex global topic. We have worked with treatment manufacturers, vessel owners/operators, crew members, regulatory agencies, scientists, and analytical laboratories. Our expertise and international alliances provides your solution to VGP compliance.

VGP Compliance Services
